

NOOR FATIMA

Software Engineering · Full-Stack Development · Lahore, Pakistan
noorefatimah0@gmail.com | +92-326-0430642 | linkedin.com/in/noor-fatimah-8b86322a7 | github.com/Noorumms

PROFESSIONAL SUMMARY

BS Software Engineering student at PUCIT Lahore (CGPA 3.5/4.00) with hands-on experience building full-stack web applications, REST APIs, and data-driven systems. Proficient in Python, C++, JavaScript, and C# with strong foundations in OOP, clean architecture, and database design. Built 9+ end-to-end projects spanning ASP.NET Core MVC, React, SQL Server, and ML pipelines. Teaching Assistant for 200+ students with proven communication, analytical, and problem-solving skills. Seeking Software Engineering, Full-Stack, or ML internship opportunities ,remote or Lahore-based. Available from July 2026.

EDUCATION

BS Software Engineering | CGPA: 3.5 / 4.00 Punjab University College of Information Technology (PUCIT) · Lahore Sep 2023 – May 2027

Relevant Coursework: Machine Learning, Computer Vision, Data Structures & Algorithms, Database Systems, Software Engineering, Web Development, OOP, Operating Systems, Linear Algebra, Statistics

PROFESSIONAL EXPERIENCE

Teaching Assistant — Software Engineering & OOP PUCIT · Lahore, Pakistan 2025 – 2026

- ▶ Mentored 200+ students per semester in OOP, software architecture, system design, and debugging — building strong technical communication and explanation skills
- ▶ Conducted structured code reviews on 50+ projects, enforcing SOLID principles, clean architecture, and analytical problem decomposition
- ▶ Designed and delivered lab sessions on testing, clean architecture, and software best practices for cohorts of 200+ students
- ▶ Worked with faculty to plan curriculum content, improving lab engagement across two consecutive semesters

ENGINEERING PROJECTS

Feline Gallery — MVC Web Application · Full-Stack Web Engineering 2026 · [Live Demo](#)

C# · ASP.NET Core MVC · Razor Pages · HTML5 · CSS3 · Bootstrap · SQL Server · Entity Framework Core

- ▶ Built a full-stack MVC web application with a layered architecture: ASP.NET Core controllers handle routing and business logic, Razor Views render dynamic content, and EF Core manages gallery data in SQL Server — mirroring enterprise application structure
- ▶ Implemented responsive frontend with Bootstrap and structured navigation across gallery sections; applied separation of concerns throughout with each layer having a clearly defined responsibility
- ▶ Designed dynamic content management for images, descriptions, and categories, keeping the UI fully data-driven with no hardcoded content

Spam Email Classifier — NLP Pipeline · Machine Learning / NLP 2026 · [Live Demo](#)

Python · NLTK · TF-IDF · Scikit-learn · Naive Bayes · Logistic Regression · SVM

- ▶ Built an NLP pipeline covering text preprocessing, TF-IDF vectorization, and classifier training, achieving 97%+ accuracy on a real-world email dataset
- ▶ Trained and benchmarked Naive Bayes, Logistic Regression, and SVM models; evaluated with precision, recall, and F1-score to pick the best performer
- ▶ Iterated on model evaluation with attention to detail across multiple classifier configurations

Android Mobile Apps (Affirmation & Quotes) · Android Development 2025

Kotlin · Jetpack Compose · Firebase Auth · Firebase Firestore · MVVM

- ▶ Built two Android apps with Jetpack Compose UI, real-time Firebase sync, StateFlow search, favorites system, and cross-session data persistence
- ▶ Implemented MVVM architecture with clean separation of concerns for maintainable, testable codebases

ML Algorithms from Scratch · Machine Learning / Academic*Python · NumPy · Pandas · Matplotlib · Jupyter Notebook*

- Implemented Decision Tree (ID3), K-Means Clustering, Linear Regression, and Logistic Regression from first principles, with no Scikit-learn shortcuts
- Manually computed entropy, information gain, gradient descent, and sigmoid functions; evaluated each model with full metric suites

RPG Adventure — Text-Based Game · C++ / Systems Programming*C++ · OOP · File I/O · Game Logic*

- Developed a text-based RPG in C++ applying OOP principles — classes, inheritance, and polymorphism — to model players, enemies, and game state; demonstrates strong C++ programming and analytical design ability
- Implemented inventory management, combat mechanics, and branching narrative logic with clean modular design and file-based save/load functionality

MNIST Digit Classification — Handcrafted Features · Machine Learning /

Computer Vision

Python · NumPy · Scikit-learn · Matplotlib · Feature Engineering

- Classified MNIST handwritten digits using manually engineered pixel-based features rather than deep learning, demonstrating a strong understanding of classical ML pipelines
- Extracted handcrafted features (pixel intensities, histogram bins, spatial statistics); trained and evaluated classifiers with precision, recall, and confusion matrix analysis

TECHNICAL SKILLS

Languages	Python, C++, C#, SQL, Kotlin, JavaScript
Frameworks	ASP.NET Core, .NET MVC, Blazor, Bootstrap, Web APIs, REST APIs, Clean Architecture
AI / ML	Scikit-learn, NumPy, Pandas, Matplotlib, OpenCV, NLTK, TF-IDF
Mobile	Kotlin, Jetpack Compose, Android Studio, Firebase Auth & Firestore
Databases	SQL Server, PostgreSQL, MySQL, Oracle, Firebase Firestore & Realtime DB, Entity Framework Core
Tools	n8n, Google APIs, Git & GitHub, Postman, Jupyter Notebook, Google Colab, VS Code
Concepts	OOP, MVC, SOLID, SDLC, Data Structures & Algorithms, Agile
Soft Skills	Teamwork, Communication, Adaptability, Problem-solving, Mentoring, Attention to Detail

HONORS & ACTIVITIES

-
- Top Campus Ambassador, LoopLab & LoopVerse (2025)
 - Participant, COSMOCON'25 Web Development Hackathon (2025)
 - Participant, Code Bees 4.0 Competitive Programming Contest (2025)
